| Since Worrow'd and made of one Complexion | 1 | |
| Since they Curv'd at Westmirster and sat | 1 | |
| Since they Enacted---- Next shall tell you What | 1 | |

years
 Lo here the Sacred (Saint-offending) Days,
 Religion's outward worth and Splendent Rays :
 Old Truth's strong Evidence, Motives to Zeal,
 Rich Badges of a Christian Commonwealth :
 Fair Hieroglyphicks of what we Professe,
 Live shadows of Eternal Happiness ;
 Lasting Records on Earth, wherein even they
 That w'ont be drawn to harken what we say,
 May by observing, only, what we do
 Read our Belief, and Reading do so too !

How! Tyrants all? What Glory is't to be
Accounted Gods, if Gods of Tyranny? (enough,
Tis strange your Conquests were not Claim'd
Yet ours (of one another) Gospel-proof:
"Either your Titles to the Crown were good,
Or ours (so mystical) not understood.

Away

*Away to Westminster, and do not Fear :
We will indulge ye yet another year.*

Hilary Term begins January 23. ends February 12.

Go to, 'Brave Hero's ! and a bring the Law,

[Teach (in Epitome) to Hang and Draw :]

Make Magna Charta speak us Lilburn-frer,

I bar Treason, which u writ without a T. ;

Correct Old Liggleton, and Print him New :

The Swora's one Tenure, more, He never knew.

The Daring Sea-men, (who Surveyeth the Deep
And cuts the threatening Waves whilst Earth's asleep)
May gather hence when Phœbe doth incline
Toth' North or South of Royal Titan's Line.

1655. January hath XXVII. dayes

Rhythm you whose Measures charm your better Luck,
I must be Mute; my Muse is Planet-struck;
Her Fancy's fetter'd, and her Ink is froze,
Complaint is made, her Pen's too broad at Nose:
I'le to the Woods, and finde some Satyre out,
There's now no Fellow to the Cloven foot.

1655 February hath XXXVIII. dayes.

Old Chronos wrangleth with the God of War,
Titan and Hermes; yea, the Ev'ning-star:
Mars stormes at Silvion; fri wns oh Aphrodite;
And rudely tells her shee's a Gream too light:
Now if those Glorious Bodies disagice
In their more Noble Mixtures, what shall we

1655 March hath XXXI. dayes.

(Four (of the seav'n) united in a signe
 Whea Royal Phæbus cuts the Aequator-line,
 And the Degree of 's great Elipse last yeare,
 Ev'n then ascending this our Hemisphere,
 Presage Notorious Actions, Direful Things,
 Pest'ring the Commons, like as they their Kings.

1655. April hath XXX dayes.

Now Numbre-witted *Heymes* doth Arise
Betimes, to usher *Pearn* through the Skies;
Pheson stands still: but's Leaden heels prepare
To invade the Virgin in *Cytherea's* Square:
But she his Pale-deep-furrow'd Face disdaines;
Cold Comfort flowes from Chill and Empty Veines.

Micro Chronicon.

Ald. Reinboldson fin'd & impris. for refusing to proclaim the A&E. against Monarchy. Peace concluded with the Netherlands, London Appr. rise, and many slain, A new Mace agreed on, Queen began her journey west ward, D. of Y. from S. Jam. House dissol. the same day, Hotchom de. K. entr. Hull, Monibly Fasts v. down, Poyer shot to death, Peace with the Net. Procl. K. ch. disguis'd from Oxf. Read. Surren. to Essex, Monctois defeated,

The Pole's perplexed, and the German dreads
The Horned Moon should pierce the Eagle's Head's :
Goths, Huns, and Vandals once had greatest Pow'r;
The Tartars and the Turks have now much more.

If then success be it which best depicts.

A Glorious Cause, Turks are the only Saints.

June hath XXX. days.

English Account

Fair Italy (whose Rich and Pregnant Soile
Breaths an Exces of Honey, Wit, and Oyle)
Throws by her Books, Lets Rot the Plough and Spade,
And sheathes her sharp (but most unnatural) Blade
In her own Bow's. Th' Eclipse and Comet Rages
Beyond the Credit of succeeding Ages.

Great causes presuppose Events as great,
Here sounds a Warlike-March, There, a Retreat ;
The Sword is drawn : I fear a plague the next ;
Much more some Sermons on a foolish Text :
For, howsoever both Infect a like,
Yet that the Body, this the Soul doth strike.

September hath XXX. days.

English Account.

From th' Honour of our Ill-begotten Peers,
 From the sour Batch of Jealousies and Fears,
 From Floods of Orphans and poor Widows Tears,
 From twice-six other over-tediou. Years,
 Good Lord deliver us. The Number Three
 Hath alwaies in it some High Mysterie.

1655.

October hath XXXI daies.

English Account.

Swift-footed-Time exposes to the Light,
Things hidden by the Shroud of Sable Night.
Ambitious Thoughts break out : fresh Furies be
Let loose, to plague us for our Surquedrie.

But Titan's happy Trine approacheth, when
They shall return into their Dens agen.

1655

November hath XXX daies.

Look with what Lustre *Venus* glads the Morn,
Yet stamps Loose-Impress on the Infants born:
With what Temptation she doth backward move,
To attract Weak Eyes, and kindle Wanton Love.

But Mars affronts her (as she doth the Sun)
Her Rosy Cheeks with Tears are Over-run.

December hath XXXI.

English Account

Now Falcifer Gravidus doth Oppose,
 Then through the Virgin (Hobbling Backward) goes:
 Hence th' Waters are Corrupted, Fishes dye,
 The Earth is Barren, a Mortality
 Afflicts the Land; Mars Rogeth up and down,
 Not quiet with nor yet without a Crown.

Of the *Apotelesma* of the Nativity of world, and the Revolution thereof, with Astro- logical Judgements thereupon.

I'le not trouble my self, or the Reader, with the various Opinions of Men or Nations concerning the 'lapsed years of the World's Creation, some being utterly lost in Concepts that repugne Philosophy, others swayed with Philosophical conjectures destructive to Divinity; and the rest miserably varying one from another: For, the Heathens afford us no satisfaction [Epicurus and Aristotle will not allow it had any beginning.] The Jews are wretchedly dissenting in their accompts [Philo and Josephus irreconcileable.] The Samaritans differing from the Jews, and indeed all others, the Jews from the Christians, and they amongst themselves, Scaliger and Petavius of the Latines, Clemens Alexandrinus and Nicæphorus among the Greeks.

'Tis true, Longomontanus, (a most learned modern Astronomer,) with a *silere amplius nequeo*, takes boldly upon him to discover this grand secret from the motion of the Sun's Apogaeum, supposing the Sun's Eccentricie immutable, & the Apogaeum a yearly motion of $1^{\circ} 1' 50'' 14''$ stiling it *Illustre testimonium de Mundi exordio, & duratione hæcenus.* For, by positing the Sun's Apogaeum in the beginning of Aries at the Creation, and his Perigaeum in the opposite point Libra; He concludes of 4000. years (within a half) betwixt the Creation and the Passion of our Saviour; and till the 1588 year of his Incarnation 554. (allowing 33 whole years for our Saviours age, with addition of the time intercepted betwixt his Nativity & Passion.) And this, this learned Author grounds on the accurate Observations of his learned Master Tycho Brabe (who indeed concluded the progresse of the Suns Apogaeum, (S.S.S.) till that year 95.30'.) And to the end we might compare the same with the Observations of sundry old and late Astronomers, throughout the respective Ages they lived in, exhibits to our view the following Table of

The Place of the Sun's *Apogaeum*, from the beginning
of the World, and the true Vernal Equinox.

| In the several Ages of | Years of the | Deduct. | Obser- | Differ. |
|------------------------|--------------|---------|----------|---------|
| | World. | | vat. | |
| Hipparchus Rhodius. | 3810 | 65 | 10 55 30 | 14 |
| C. Ptolomeus Alexand. | 4099 | 70 | 3 | |
| Albategnius Maham. | 4849 | 82 | 53 82 16 | 37 |
| Gualterus Norinberg. | 5454 | 93 | 43 94 15 | 32-- |
| Nicolaus Copern. Tur. | 5492 | 94 | 23 95 8 | 45--- |
| Tycho Braheus Dan. | 5554 | 95 | 30 95 30 | 0 |

Wherby it appears that the moved *Apogaeum* of the Sun proportionably deduced (according to the Annual motion here allowed it) throughout the respective ages of their Astronomers, differs no where more then 45. from what it was observed by them, Ptolomy excepted, who (as saith *Longomontanus*) too confidently maintained that *Hipparchus*'s supposition or the Sun's *Apogaeum* had continued invariable until his time: his observations being without all questiō violently fitted to such a purpose.

And (to say the truth) were it that we had the Sun's *Apogaeum* precisely and uncontrollably so determined by *Longomontanus*, or otherwise by any other; very well it might be called *Illustre testimonium* of the worlds Original. But for so much as later Authors do all or most of them differ (more or less) from him in the *Annually motion* of the Sun's *Apogaeum*, and consequently in the place thereof, (for instance *Bullialdus*, who makes it this year much lesse then he, viz. 3°. 60. 26. 27. by abating 5. Seconds of what *Longomontanus* allows for its *Annually motion*;) I dare not confidently build upon this Foundation: which would (this year 1655.) compute of above 5621. years since the *Creation*, yet that far short of what arises from *Bullialdus*, whereby the Age of the World should now be no les then 6091. years both of them exceeding (but the latter by farre) that Accompt which the latest and best of *Chronologers* fit down with. So that hence (also) we receive very little or no satisfaction.

But let be the Age of the World what it please: the *Season* of its Birth I undoubtedlily take to be the *Spring*, the particle of *time* in which the mighty *Giant* (the Sun,) began his unwearied

ed Course according to appearance from the first scruple of *Aries* in the Meridian of *Mesopotamia* where *Paradise* is by most very learned both in *Divinity* and *Geography* affirmed to have stood, unless we admit of such *Allegories* as make *Paradise* to signify a place of *Pleasure*, and the four Rivers four *Cardinal virtues*: or hoist it up in the Air under the *Moons Orbit*, fancying those rivers to fall down from thence, and running under the *Ocean* to rise up again in those places where now they are found: the one Opinion being as unwarrantable, as the other is ridiculous.

For, it is as true as *Truth* it self, that *God* instituted the beginning of the *Ecclesiastical year* at the *Vernal Equinox*: whereby he restored to the *People* the beginning of the year which the *Patriarks* had observed before them, and which they by their long Conversation with the *Egyptians*, had discontinued; whence the soundest, both *Divines* and *Historians* conclude, that *God* restored to the *Israelites* the ancient accompt of the year & the true beginning thereof, partly to the end it might be a memorial of their departure out of *Egypt*, partly that the *Worlds Creation* might be recorded, and partly that it might be a Prophecy of *Christ*, who was to suffer at this time. So that the *Creation*, the *Celebration of the Passover*, and the *Redemption of the World*, (by the death of *Christ*) do all of them fall out at the same time.

Now that the *Patriarchs* had this beginning of the year, who can doubt it? They had the most natural accompt of the year, and such is that which fixes its Original at the *Vernal Equinox*. For seeing the mode of perfection is twofold, one *cum res sit*, the other *biun facta est*, the consummate perfection doth in no wise appertain to the *birth* of the thing, but the *Inchoate*, and (as I may say) *vernant*. For illustration whereof, it may be added, That the *Spring* is the most beautiful and pleasant time of all the year, and the most proper for generation of things: which *Moses* not obscurely implieth, where he saith, *Terram germinasse herbam virentem*. Neither is the Objection of *Adams* plucking fruit from off the forbidden tree available, it being very well known that in some *Eastern Countries*, (yea elsewhere) they have fruit growing twice a year: the *Poma aurea* of *Spain*, both at *Spring* and *Autumn*. Nor does the great volume of *Heaven* but confirm this opinion; whilst the *Dodecameronie* of *Aries* com-

menees the natural year, wherein the first conversion, or change of these sublunary things is caused.

To conclude this point. The Chaldeans had their learning and wisdom from the Hebrews : Now forasmuch as they appointed the beginning of the year at the Vernal Equinox, as did also the Persians, 'tis very probable they borrowed this accompt of the year from the Hebrews: And therefore saith Scaliger Exerc. 257 *Mundum verè ortum primo, & autum aut sapientes & credere per eft.* So runs (also) the sentence of pious Antiquity.

*Hæc est illa dies quinta & vigesima Marti,
Quâ verbo Domini mundi textura peralba eft :
Mortuus hæc Adam : Mortem hæc devicit Iesus :
Hæc eft cœfus Abel : fuit hæc mæſtandus Isaacus :
Hæc Pascha iudicium : Hæc David Rex dicitur unius.*

Which is thus much after my rude version.

This is (of March) the five and twentieth day,
Whereon God finish'd th' Heavens, Earth, and Sea,
And all therein : when the firſt Adam di'd ;
And when the Second [*J E S U S*] crucifi'd.
When Abel's blood wa: by his Brother ſhed,
And Isaac's ready to be offered,
The Paffover proclaimed to begin,
When holy David was Anointed King.

Of the Worlds Revolution.

If this then be the season of the year, wherein the world had its Birth, as the moſt learned Divines, Chronologers, and Astronomers have unanimously concluded. It followeth next, that we consider the Revolution thereof this preſent year 1655. and from thence derive our Judgements Astrological; Non aliter ac in *Nativitatibus quid nato per ſubsequentes annos eventurum fit, pronunciari ſoleat ex thematibus Revolutionum, qua eriguntur ad locum Solis qui eft in Radice.* Orig. Part. 3. cap. 3.

Now to find out this temporary moment of the Sun's Revolution to the firſt ſcruple of Aries (where he was in the Radix of the Worlds Creation) hath been by ſome accounted imposſible ; by others a task very difficult and uncertain. And (to ſay the

the truth, such has been the wide difference herein amongst Astronomers, until of late days, that the Calculations (how nice and curious soever made from the several Tables they published, howbeit every man with equal confidence and commendation of the verity and exactness of his own, have wanted that precise concurrence which is requisite to raise thereon so compleat an Astrological structure, as might withstand the tempestuous storms that frequently arise from the turbulent Sea of Ignorance and Malice. Whereof Cardanus was so sensible, that (because he would not run the hazard of his credit, so great in the world) he rather wholly neglected the (then so) doubtful Cusps of the Houses in these Revolutionary Figures, saving thereby the labour of erecting Schemes, then from such incertainties to raise alike uncertain judgements: In which respect he prescribes a regard onely to the Places and Aspects of the Planets. And indeed should we grant the Tables Astronomical (what as yet we find not in them; I mean) the exactness aimed at and coveted by all men: yet, till the long-sought for and hitherto unfound certainer way of attaining the true Longitude be discovered, some discrepancies (more or lesse) will be always occurring.

In the mean while, I could wish, that some ingenious Artist would apply the Directions of Daniel Santbeck, *Probl. Astron. by Geom Sec. I. Prop. 10.* who by the help of a Geometrical Quadrant there described, sets down the manner of observing the true time of the Equinoxes, whereby they may discover, not only how far the Calculations made by the Tables differ from (but also which Tables come nearest) Observation; and by this means make choice of the best, whereon to ground their Judgements Astrological.

But forasmuch as all, or the most of our Annual Prognosticks, are commonly extant before the Vernal Equinox, on and about which day those Observations ought to be made, it cannot be expected that we should here proceed upon those grounds, the Birth of what now we present you with, anticipating its Fortune in the Press not less than Lunar Revolutions: wherefore all we can here do, to do fairly, will be to make choice of the best Astronomical Tables, in which Number I rank the Philolaick, as solving the Phenomena nearest exactness, when handled by a skilful Artist, and reduced (not upon the

the bars credit of every prostituted Catalogue of the Difference of Meridians, but with regard had to Ecliptical Observations, determining (so near as may be) the true Longitude: otherwise great Errors may ensue, especially in the time of the Solar Ingresses, Eclipses, and other Lunations, and yet the Tables excusable.

These things well considered, I cannot see with what shew of equity we should be derided, or Astrology exploded, in case we arrive not at such preciseness in our Annual Judgments as is looked for from us, by those which know not the handling of a Science, whose subject is so remote, whose paths be so variously winding & intricate. Or why Astrology should be contemned or slighted for want of Perfection more then all other Arts or Sciences, since really there are none without some defect or other; not any one that can truly say, it is free from every scrupulous exception: For, (omitting Physick, and the rest, which cannot justly boast of nigh so much perfection) what Geometrian can stand up and truly tell me, he hath found out the exact Quadrature of a Circle, or the Duplication of a Cube? What Algebraist can resolve the so long sought for Equation of three discontinued Numbers in Algebraique proportion? And should therefore those noble Sciences be rejected as vain and foolish, and the Professors be no better accounted of than Impostors; when nevertheless we cannot but confess the most excellent & daily use made of Geometry, both of Sea and Land, very well knowing that the Geometrician can square a Circle, (though not precisely, yet) so near exactness, as leaves the issue of his endeavors without any sensible Error? In like manner, because the Astronomer determines not precisely the true places of the Planets, (howbeit very near the same, and the Eclipses of the Luminaries, to admiration) the Astrologer sometimes strayes a little in the Species and Times of the events thereon depending, shall we therefore (altogether excusing Astronomie) lay the whole blame & weight of our indignation on Astrologie, whose ~~Signes~~ suppose the Planets true places, which are Scientiarum apices, the perfection of Sciences, that God (in his wisdom) would not have known ab initio, but reserveth only to some peculiar Men and Ages?

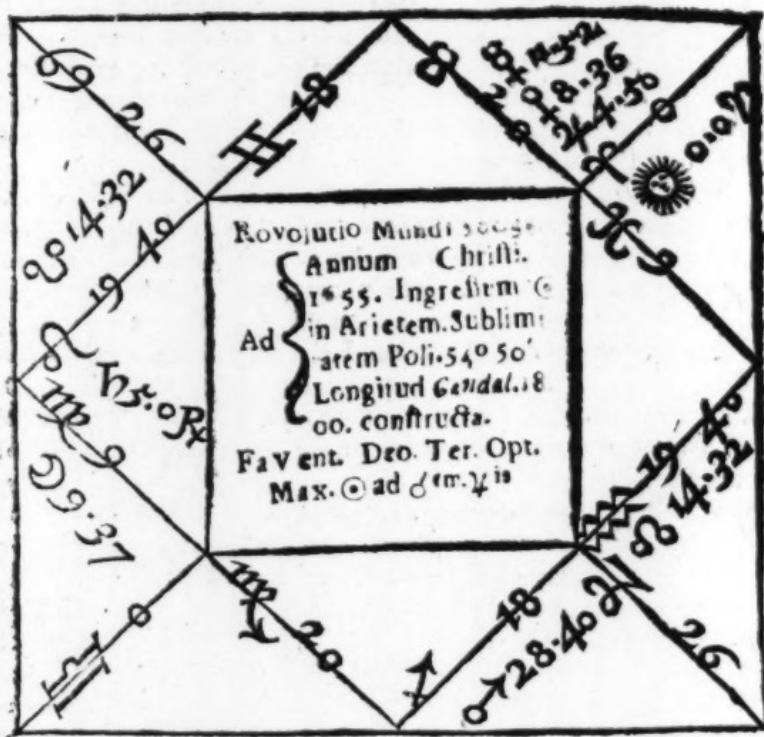

I confess it is but too true, that (like as in all other Sciences, so) in this, as there are and ever have been some Hereticks and Miscreants,

(7)
Miscreants, who rail & exclaim against Astrology, (for no other reason, but) because they apprehend it not, so there are a sort of looile and ignorant pretenders, (*Spurii non veri sibi Arti:*) who expose to sale their *Lying Oracles*, do exceedingly blemish and disparage the Science, administering thereby great advantage for the malitious to inveigh and rail against it, both from the Presse and Pulpit, and to bespatter the more able and honest Professors thereof, with the Titles of *Figur flingers, Gheats, Impostors*, and (I care not what) other abusive Epithets.

But should we (which my very soul abhors) set light of the Deity, because *Caligula* and *Lucian* would not grant any? or suspect the *Reginens* of the *World*, because *Sardanapalus*, *Epicurus*, *Lucretius* and *Nero* denied Gods providence? or esteem of humane things more than sacred, because the *Machiavelists* teach that *Politie* might consist without Religion, accounting it nothing but an empty name, and the *Bond or Gyre of Pouerty*? Or should we condemn the whole *Catholicque Church*; because of the many ravening *Wolves* and subtle *Foxes* crept into (and now so miserably despouiling) her? O., decrying all the *Glory*, because some *Tame buggering Changlings* have dishonoured the Function, seduced their *Auditory*, and preferred their worldly interests and carnal ends of pride, *vain g'oy, strife, covetousnes, and desire of prebeminence above their Brethren*, to the truth and peace of the *Gospel*? Should we (I say) for the incredulity of some, condemn what (for doing so) might damn us? Or for the impicity and hypocrisy of a few, cast dirt in the face of a whole *Covent of Learned and Religious men*? Let the enemies of *Urania* themselves be Judges, if we might not be justly taken for fools or knaves, or knaves and fools in *Folio*? And let all rationall men say, whether they be leſſe, or any other, that have causlessly and publickly ſo derided and railed at us.

But *diverticula in viam*, to return into the road again, (for I cannot crave pardon for this digreſſion, ſo preſſing is the caufe thereof!) The *Aristocall Ingress* reduced to *Kydde* is this yeare (by *Iacob Bullialdus*) at *1h. 38' 41"*. *Apparent-time*, in the afternoon of the 10th day of *March* (*Old Style*) unto which I erect the following *Scheme* of the *Worlds Revolution*, according to the (generally received for) true Accomp^t, the *Vulgar and Diſtinctiōn* being one year more.

The Scheme.

Behold! We have here the 19. degr. 40'. of the *Lion* ascending, the second of the *Bull* culminating, *Cynibis* separating from *Conjunctio* with *Saturn*, and hastening to the *Quartile* of *Mars*, He to the *Trine* of *Saturn*, and about ten dayes after to the *square* of *Jupiter*, who is in *Conjunction* with the *Sun*, *Venus* and *Mercury* in the beginning of the Equinoctial Sign *Aries*.

The *preveniential New Moon* in the 190. 24. of the *Fishes*: The *postveniential Full Moon* in the 10. 33. of the *Balance*: *Mars Almuten* (or *Lord*) of the *Revolution*, as exceeding the rest in number of *Essential Dignities*, free from *combustion*, and *Reyes* of the *Sun Oriental*, swift in motion, and just upon entering the *Goat*, wherein he is exalted.

All which (with much of what more was requisite to be) considered, I conclude: That the year will be generally inclined to drought: For, besides that *Jupiter*, *Venus*, and *Mercury* be all of them near the Sun in the *Ram*. (a Signe of the fiery Triplicity) unto whom also the Sun successively defluxeth, *Mars* continueth for the greatest part of the year in the cold & drie Houses of *Saturne*, who is now got to the *Virgin* (a Signe of the same nature) where the Moon likewise resideth: More particularly, that the *Winter* shall be temperately cold & drie, the *Spring* moderately warm, but exceedingly drie: the *Summer* cooler than usual, but the *Autumne* intemperately cold. Whence it naturally follows,

That the *Winter* shall prove very seasonable: but the *Spring* not adorning the earth so plentifully as moderate minds could wish for, neither the fruits thereof so good or gorgeous. The *Summer* (& consequently the remaier of the year) very healthful, but the fruits thereof *serotine*: Losse and hurt to the fruits of *Autumne*, in quantity, rast, and comliness. *Omnis nimis Naturae inimicorum est.*

The moisture that will be is signified by the uncertain nature of *Mars*, according to that of *Haly*, *Eft Mars natus à quidem secus, sed valde mutabilis, &c.* *Mars* (saith he) is indeed of a drie nature, but withall very changeable: so that sometimes he is of a moist, another while of a drie nature. *Hum. etatvr vèrò & ministrat calor ejus quando descendit versus terram, & inde signat infirmitates & solares ex occ. sanguinis provenientes:* His heat is moistened and diminished so often as he descends towards the earth, and then he portends infirmities & griefs proceeding of blood.

Moreover, *In coniunctione vel oppositione Luminarium, que precedit revolutionem anni, si Mars locum Luminarium aperire, trahit fulgura, tonica & lampades:* If at the new or full Moone preceding the years revolution, *Mars* beholdeth the place of the Luminaries, lightning and thunder, with lamps or leashes of fire succeed the same. And commonly these are accompanied with showers.

Mercurius in Ariete multitudinem ventorum fortium, secundum; *Mercury in the Ram foretells a number of strong & dry winds:* and I have often observed, that when *Mercury* is sub:adit, the weather is very tempestuous and blustering.

But if in judgements of this nature, I should give the reasons of my prediction, it would surfeet the Reader, and swell my Pamphlet

to a Book. However, to satisfy the ingenious on what grounds we proceed ; and to convince a sort of people, who reflecting on *Marianus* his Rule [Si vis dividere, totum contrarium ad unum
digito ejus quod Astrologi pollicentur,] suppose we do but gueſſe at the weather , and believe that if They ſhould ſay rain, when the Astrologer writes fair and dry weather ; or calm, when he foretels wind, they ſhould hit the mark as often as the Astrologer : I will (once for all) hint a few of the many cauſes, which either are, or ſhould be conſidered, by all ſuch as aim at credit or truſh in their preditions.

First (then) you muſt know, that when the Sun (according to appearance) wheeſls to a Star of a hot nature (as to *Mars* or *Jupiter*) it argues a hot or warm diſpoſition of the air : if to a Star of a cold nature (as *Saturn* or *Mercury*) a diſtempered air through the extremitie of cold. And the mutual conjuſtione of Stars that be of one complexion augments the ſame quality : As the conjuſtione of *Jupiter* and *Mars*, by the twofold vertue of their heat, make the lower Region of the air more fervent.

Many Planets (elſpecially the ſuperior) in Northern Signs, a hot Summer, or a temperate Winter : The contrary when many Planets (the three ſuperior chiefly) are in Southern Signs: for ſo they ſignifie a cold and moist Periſtasis of the ayre, and a colder Winter.

Saturn in *Scorpion* ſigner, and elſpecially in *Capricorn* and *Aquari*, terrible Winters of froſt and cold ; Summers remiſs in heat, a famine, an evil increase of wine, and of all ſuch fruits as delight in the Sun.

Moreover, when the cold nature of *Saturn* is duplicated by the preſence of *Mercury*, it makes the quaſity of the ſeaſon colder: but if ſuch a Conjuſtione or Aspect of the Planets falls out at the new or full Moon, or at any other Aspect of the Luminaries, the vertue thereof shall appear much more effectually ; nay, if within three dayes preceding a new Moon, it addeth vigour to the vertue of ſuch a Planetary Conjuſtione, or Aspect.

But when Stars of a contrary nature be united by commixture of mutual Aspect, then ſhall a temperate affection of the ayre attend the ſame. The like you may judge, if there happen at the ſame time Conſtellations of diſferent naſures, whereof one produces froſt and cold, the other heat, or if one of them bode a dry ayre, the other a moist; for ſo of neceſſity a mean is produced:

the influences of contrary *Constellations* mutually impeding and mitigating one another : As the *Conjunction* of the Sun, and *In-
spire* or *Mars*, (when both in *Fury signs*) brings with it greater heat, than if one were in a cold sign, and the other in a hot.

Further more, the full and new Moons that be celebrated in *Angles* (the *Horoscope* especially, or *Angle* of the Earth) are usually accompanied with rain the same day they happen. But here you must note, that the Effects of the Stars do often times shew themselves before they come into partie Configuration, that is to say, during the time of their *Access* or *Application* one to another : and sometimes in their *diffusion* or *separation*, which the Ancient *Grecian Astrologers* named *Epicemesis* and *Proce-
mpta*.

There are some, who (not altogether without reason) erect *Schemes* to the Apparent times of the *Conjunctions* of the *Luminaries* : and having found the *Altitudes* of the *Figure*, and observed what *Planets* be *Angular*) direct the *Horoscope* of the *Conjunction* (allowing one day for every $130^{\circ} 11'$. the mean motion of the *Moon* in one day;) for, that when the *Horoscope* comes by such direction to any *Planet* that was then *Angular*, or to the *Lord* of the *Lunation*, some change of ayr, to rain or snow, or wind, at least a dark and cloudy air, succeedeth.

Consider likewise the Position of the *Lord* of the *Lunation*, in the *Figure*, and the *Latitude* of the *Moon*; for, from thence come the winds that occasion Tempests.

Take notice also, when the *Moon* comes within the beams of the *Lord* of the *Figure*, or the *Angular Planets*, for then principally does she manifest her self according to the nature of the *Planet*.

The *Conjunctions* of the *Planets* with *fixed stars* not far distant from the *Ecliptique*, produce a notable alteration of the air: And when the *stars* leave one Sign, and enter into another, they betoken showers. Yet still a regard must be had to the Qualities of the *signs* and *seasons*. As if the mutation be in a watery sign, and in the Winter or Spring, then may rain or snow be safely denounced [snow in winter, if so be a cold *Perihelion* is impending.] The general rule is, *Grandines in Aprili & Octobri, Nivis in Hunc-
iustate tonitrus*.

A special regard must be also had to the nature of the *Earth* & *Air* peculiar to the *Horizon* you live in, or write for, because that in all places they are not of a like nature: And no less to the *Windes*

Winded that agree to the particular season of the yeer: forasmuch as they blow not alike in all places, some being *Topical* and peculiar to one place; others *Eboronic*, which come at a certain time of the yeer: Wherefore Cardan.7. Aph. 29. Oportet Cœum cognoscere Regionis, & quo tempore Annū si tempestuosum, cum etiam eis signo Regio neglē convenientia, si veritatem in judicando usq[ue] venimus.

In the next place, let the *Interval* of the *Sun*, *Moon*, and *Planets* be observed, which consists of the *Aggregate* of the *Sun* and *Planets Orb* upon the access or deflux thereof, and especially in the corporal *conjunction* of the *Planets*: As in the *Suns application to Conjunction with Saturn*, because the *Suns Orb* consists of 12. and *Saturn* of 9. therefore so soon as the *Sun* shall be distant from him, not more than 21 degrees (which number is produced by the Addition of 12. and 9. degrees) the cold commeneth, and lasts for the most part, until the *Sun* have separated himself 21. degrees from *conjunction* with him.

In like manner the *Planets*, which have their *bodies* opposite, when they behold one another by a forcible *Aspect*, as the *Opposition*, or *Quadrile*, or *Trine*, do introduce a memorable change to rain, or cold, or heat: As, if the *Sun* be in aspect with *Saturn*, a cold *Peristasis* of the air, especially if either of them be in *watry signs*: In the *Summer* time frequent showers, but in *winter* cold and snow. So also the *configuration* of *Mars* and *Venus* do bring for the most part heat and warm showers, *Jupiter* and *Mercury* vehement blasts of wind. And these *Configurations* of the *Sun* with *Saturn*, *Venus*, and *Mars*, *Jupiter* and *Mercury*, are (by the ancient *Mathematicians*) called, *Portarum seu valvarum Aperi- ziores*.

Nor must you neglect the *rising* and *setting* of the 15. *fixed stars* of the first, and the 15. of the *second magnitude*, recorded by *Ptolemy* in his *Calendar*: For, if upon the dayes that those Stars rise or set with the *Sun*, there be a new or full *Moon* celebrated, or that some *Planet* of a conformable nature with those *fixed Stars* shall rise or set with him, or some other memorable *Constellation* that day happen, then may you safely predict a notable change of aire. And this is confirmed of Cardan 7. Aph. 21. Oportet & exortus & occasus Heliacos clariorum syderum observari, vix enim fieri, ne sub ortu Caniculae fuscitatis, mo hi non vigeant, & sub Arcturi occulta imbre. And indeed unless the rising

sunz & setting of the fixed stars did operate something, we should hardly have rain at one time more than another : For (as saith the same Author, 7. Aph. 72.) *In certis est Planetae haec concursum.*

Observe also, when the *Moon* or any other of the Planets transits the *Angles* of the worlds Revolution, or the *Angles* of the new and full Moones : for then be sure some change of air ensueth, according to the nature of those Planets.

Moreover, if upon a *Conjunction* or *Opposition* of the three superior Planets, either amongst themselves, or with the three inferiors, the *Moon* soon after apply unto them by an *opposite* or *quartile Configuration*, be assured of rain or winds, according to the nature of the Planets so conjoined or opposed.

Consider too, the *Eclipses*, *Comets*, and other general *Configurations*, for oftentimes they augment or mitigate the special : I presume it is not forgotten yet, what vehement and mighty winds we had in January & Febr: following the first appearance of the *Comet* in Decemb. 1652. And what incredible tempests were the two last years, on the Coasts of England, France, Spain, Holland and Germany, in the *Atlantique Ocean* and *Baltique Seas*, the Owners of the Navies thereby scattered, and of the many ships, goods and men that were lost, and therein miserably perished, have cause to remember.

Neither do ye wholly neglect the Rule of *Eudoxus*, which *Pliny* tells of (lib 2. ch. 47.) viz. That in the space of four years, not only the winds, but all other tempests (for the most part) return to what they were before. For, although that Rule of his depends only upon this foundation, [That at the end of four years next following the *Leaf-year*, the *Political year* agrees almost with *Astronomical*, in respect of time, the rising, setting, and mediation of the fixed Stars with the Sun; howbeit the motion of the *Moon*, and the other Planets be far different:] yet because the power of the Sun and fixed Stars is so great in stirring up of tempests and the *Moon* not far distant from the place opposite unto that wherein she was four years before, it is probable, that almost the same tempests may return : I confess I never observed it. But touching the *Mansions* of the *Moon*, I do not regard them, as remembering what *Cardon* admonishes 7. Aph. 57. *Mansiones Lunae inspicere, est Luce pyle a luce suo, a luceo in signo, a Luxine, Plane* &c. *Et Filiis,*

And

And these are the Rules I thought fit to communincate, concerning the change of the Weather.

Of the Diseases this Yeare.

Now as touching the Diseases of this year, although it be true, That a drie year is wholsomer than a moist, yet according to *Cardan*, 3. Aph. 7. *Predominante siccitate, Febres acuta generantur*: when siccitie prevails, acute Feavers are generated. *Exigitur enim morbi tabifaci, Opibalmia, C. picis & A. ticulum dolores, difficultates fustinorum, & urine.* 3. Aph. 10. Diseases also are excited that lead to *Consumptus*, Inflammations of the Eyes, griefs of the Head and Joynes, Diseases and pains of the Entralls, with stoppage of the Urine. More particularly, the Winter shall abound with *Head-aches, Coughs, Hoarsnes and Rhums* (which according to *Galen*) be symptomes of a full head. The *spring* with diseases and death of aged men: The *summer* with abortive births and disenteries, or bloody fluxes, amongst such as be of a *Begmatick complexion*: Nevertheless, a summer colder than usual is very favourable to them that be melancholike or cholerike; though to such this *Autumn* will be very obnoxious; for it brings with it drie diseases of the eyes, acute and durable Feavers, Compressions of the breast, and Exuberances of black choler, yet shall it be beneficial to women, and such as are of a *figmatick complexion*.

Moreover, I greatly fear that *England* will this year suffer by the *Plague* or *Pestilence*: Howbeit we cannot (I confess) judge thereof by the face of the Heavens, only as *Cardan* himself affirmeth, 2. Aph. 132. and therefore (*saith Origenus*) *Ex historiis & experientia petendum erit, quibus periodis Regionem aliquam inficit*: We must gather from Histories and experience, in what number of yeers it is usually wont to infect any Nation, Country or City; it being certain, that in some places there are set times and periods in which the plague rageth: For, the same *Origenus* tells us; how at *Francofurt* they have found by experience, that about every 10. year, the seeds of the Pestilence hath shewed it self; As in 1506. being the first year of their *Academy*, when *Saturn* was in the *Lyon*; in 1516. when he was in *Sagittarius*, and in 1526. when in the *Moon*; the like he proves of other years. *PP.*

cerus also informs us, that whensoever Saturn was in the *Lion*, or in *Aquara*, the countrey of *Wirsenberge* hath been infested with Pestilent diseases, and moreover that the same have been intended or exasperated by the Conjunction or Opposition of Mars unto him. And I remember it was the observation of our learned Countrey-man M^r Cambden, That *Saturn* never passes through a Sign of the Fiery Triplicity, but he afflicts the City of London with a Plague or Pestilence, or some other Epidemical disease: And I willingly agree thereto with him; for (having consulted History for the years, in which any great Mortality or Plague afflicted us) I finde, That *Saturn* at or about the beginning thereof in *London*, was ever in *Aries*, *Leo*, or *Sagittary* (*Signs of the Fiery Trigon*.) I will instance a few for better satisfaction.

He was in *Aries* when that universal Pestilence first began in *London*, in the 22. of *Edw. 3.*

He was in *Sagittary*, when the sweating Sickness began in the first year of *Henry 7.* and in *Leo* when that other sweating Sickness began in the 22. of his Reign.

He was again in *Sagittary* upon that third sweating Sickness in the 9th of *Hen. 8.* and in *Aries* at the beginning of the fourth, in the 20th of *Hen. 8.*

He was also in *Sagittary* in the 36th of *Hen. 8.* when that great Plague began in *London*, which adjourn'd the Term to *S^c Albans*.

He was also in *Leo*, when in the 6th of *Eliz.* the Pestilence began in *London* after the return of the Army from *Newhaven*: And again in *Leo* in the 36th of her Reign, whilst that great Plague raged in *London*, which caused the Term to be again helden at *S^c Albans*.

He was in *Sagittary* in the first yeer of King *James*, when that great Plague began in *London*, which devoured so many thousands.

And was he not again in *Leo* in the first of King *Charls*, when that other great Plague began in *London*, which removed the Parliament to *Oxford*?

Was he not in *Sagittary* in the eighth, ninth, and tenth years of King *Charls*, when the Pestilence again raged in so many parts of *England*?

What strange and unheard of Pestilential diseases reigned in *London*, *Oxford*, and other places of the Nation, during *Saturn's* progress

[16]
progress through *Aries*, in the nineteenth and twentieth years of the same King? And have we had other or less the most part of the three years he was last in *Leo*?

Many more I could have instanc'd (for I have them all by me) but I suppose that these few may satisfie the intelligent Reader, if therein he be but half so impartial, as I have been curiously inquisitive.

But the chief *Celestial Causes* (or *Signs*) threatening the *Pestilence* (or other violent diseases) this year, are the *Comet* in Decemb. 1652. and the great *Eclipse* of the *Sun* in *August* last, whose point *Deficient* was within 3. scruples of the *Revolutionary degree* and minute ascending this year 1655. the dire effects whereof began on S. *Andrews day* (the last of November 1654.) this being the 120th day from that of the *Eclipse* (agreeable to 4^h. 57'. the *Interval* or space of time betwixt the *Sun* rise on the second of *August*, and the middle time of the then visible conjunction of the *Luminaries*:) and continue in force two whole years, four moneths, and four days (proportionable to 2 hours, 19' the time that *Eclipse* lasted) that is to say, till the *Annum-sation* of our blessed *Lady* commencing the year 1657. according to the *Ecclesiastical Accompt*.

Cardanus (Lib. 15. cap 78. de Rer. vtr.) enumerates other signs of the *Pestilence*, which be very considerable, as the *Murrain* amongst *Cattle*, who (because their mouths are inclined downward) do quicklier attract or draw unto them the *impure vapours* of the *earth*, and are therefore more and sooner offended, especially those of a moist nature, as *Sheep*, *Oxen* and *Swine*; for, *Goats* and *Horses* are not so subject thereto, and much less *Dogs*. For, when it continues amongst such creatures, Men are easily infected. So likewise an unspeakable multitude of *creeping creatures* of *Frogs* or *Flies*, are a sign of future *Pestilence*. In the 12th year of *Ricb. 2.* and in the moneth of *July*, whilst the King was at *Sheene* (now called *Richmond*) there swarmed in his Court such a multitude of *Flies* and *Gnats*, skirmishing one with another, that they were swept away with *brooms* by heaps, and *bushels* filled with them; after which (saith the Story) there followed a great Mortality.

Moreover, the *Plague* is signified by *Fires* wandering in the *aire*, especially if it be soon after the *Spring*: so also by a *cloudy* and *scorched Summer without windes*: by *much rain* that is followed with *great*

great heat (for this spirituishes the Water, by which the *Pestile* is generated : (*By a multitude of Locusts dying*, (for they endanger not a little the corruption of the Aire.)) And the Countries or Cities infected do frequently transmit it to their Neighbours, specially those that lie westward of them. *Solex enim Pestis quasi motu Celi diurno, ob Oriente & Occidentem procedere*: The *Pestile* or *Pestilence* follows the *diurne Motion* of the *Heavens* from *East* to *West*. The like is portended by *confused sounds in the Night*, by *Earthquakes and Inundations*, which are both the *Causes* and *Signes* thereof, as I could manifest by History, if I feared not the want of Paper.

Now (lastly) as touching the *Continuance* of the *Pestilence*, *Cardan* tells us *7. Aph. 121.* *Pestis quatuor annis durare nunquam potest*: The *Pestile* or *Pestilence* can never last fully out four years ; Which *Aphorisme* must be understood not of divers places but of one ; Experience teaching us, that it never lasts longer. For example : the contagious universall *Pestilence* (before mentioned in *Edw. 3.* time, although it began in the *East* and *South* part *A° 1348.* and continued till *1357.* (above nine years,) yet we read not that (in all this time) it continued wholly out four years in any one Province, County or City, notwithstanding it spread it self all *Christendom* over. The Reason whereof I could give you, but that I would avoid tediousness.

Of Warre and Peace.

For *Warre* or *Peace*, I cannot say otherwise, then I have already in my *Hemeroscopion* for the last year *1654.* from the *Place, Motion, and Nature* of the *Comet* therein treated of : something I may *inlarge*, something I may (in effect) *reiterate* : and the rather, because my Book for that year hath come to the hands but of a few, being seized on and stifled in the very Birth.

Si magne sunt Cause, etiam ab his inter Homines magni effectus provenient, & a diuturnis duiturni, & a feris atq; sevis atq; diri. If there happen great Causes (saith *Cardan*) great effects shall befall men proceeding from such Causes ; And if those Causes continue long, and withall be fierce and terrible, so

shall the effects be. Great and formidable Causes never wanted proportionable events to succeed them. Now forasmuch as this Comet appeared in the 8th Period of the greatest of Climacterical Conjunctions, celebrated since the Creation, can it otherwise be, then the Fore-runner of a mighty Catastrophe in Humane Affairs? Nay observe if it introduce not another Administration of Politie and Religion, in most of the places unto which it was verticall, or through whose Ascendent it passed. For, although it was not exactly verticall to any part of England, yet so cloe it comes to us, as I presume no wise-man will deny, but we have felt the furious effects thereof in a more then ordinary Measure already. To instance the Dissolution of Parliaments, and the Change of Government here in England, were but needless, 'tis known (and wondred at) all the world over. Other vicissitudes and Changes are approaching, and can such be, were they ever without Warre and Blood-shed? *Tristis Cometa facies, quid nisi magnum Principum fata?* Color plumbus, quid nisi mortalibus Bellis & Pestem denunciat? The sorowfull face of a Comet, what else denounces it, but the calamities of great Princes: What the leaden, dull and duskie colour thereof, but Warres and Plagues to Mankind? — But there are who rayl and exclaim against us for Prognosticating of Warres, or Plagues, or Famine, &c. from the colour of Comets, &c. And let them so: Perhaps they may at God himself (for what is it they dare not do?) who in the 6th of the Revel. describes unto us by the different colours of Horses, Victory, Blood-shed, Famine and Death or Pestilence? Peruse the scrupulously learned Dr Hammond's Paraphrase and Notes upon this Chapter: 'tis full of Mystery. — Death, mischief, and miseries unto Kings and Princes, &c. For why else did this Comet so hastily ascend the Chair of Cassiopea, and vanished in that Constellation? *Designat Cassiopea sedens in solio Regali Personas illustres & potentes, Gubernaculaq; Reipublicae moderantes:* Cassiopea sitting in a Royall throne, denoteth Persons that be illystrious and powerful, and such as steere the Common-wealth: to the first of which Death is portended; to the later Depression or Deflation, Horrid Treasons and Exiles. And this not alwayes in the same or the subsequent year (to that wherein the Comet first appeared) but oftentimes in some proportionable time after, when the Comet cuts the degree Ascending, or some other of the

the Hylegiacall places in the Gestures of such persons.

Again : *Changes and Calamities of Empires and Kingdoms, &c.* For, seeing that Comets are not contrary to, but over and above the ordinary Nature of Heaven, unto what else should they be referred, then Empires, which are nearest thereunto of all greatest Humane things, and in which the welfare of all men consisteth? *Quod in Calo novus Cometa discurrens, hoc est in terris nouis aliquis Homo, qui seu Magnitudine Imperii, seu Armis, seu dogmata praecepit aliquando se famam conciter, & ut Cometa terrare, sic iste vi illata, seu alia calamitate magnum generis humani partem exagit. Forasmuch as there is in Heaven a new Comet wandering, that signifies upon Earth some new or strange Man, who shall either by the greatness of his Empire, or his Armes, his determination or decree, raise up some excellent Fame of Himself: and as this Comet by the Terror thereof, so he by his power brought with him, or some other Calamity, shall disquiet and trouble a great part of Man-kinde. Now who this new or strange man is, or whether he be (yet) in the number of Man-kinde, I shall not take upon me either to discuss or determine. Only this, there is at hand a Direction of the Sun to the Train of Jupiter, which I recommend to the judgment of the learned and honest Astrologer: (for if otherwise, he cannot, or will not understand it.)*

Tartareæ fugient volucres, fugit atra Caligo:
Et metus atque Horror, Sole Oriente fugit.

A te (——) Radius sic pulsat, recedat,

Inque suam fugias Gens inimica Stygem.

Te Nascente, Comes Phœbe. Stella aurea fulget,

Et luce insolita splenduit ante Dies.

Vim geminam Flamma praestes, Tu(——)savos

Ure Hostes! Populum Lumine restituas!

When that fera & fatal *Comet* appeared in the year 1618. it was the judgment of Kepler (a great Mathematician and Astrologer) that because there were two other *Comets* preceded it the same year, and the last was dissected or separated into two parts, *Imperium Turcicum dilatacius futurum*, & quasi in duo dividendum, quorum alterum Orbem Meridionalem, alterum Septentrionalem esset amplexurum. That the Turkish Empire should be enlarged, and in a manner divided into two: one of which should comprehend the Southerne, and the other the Northerne parts of the world. And there is an ancient Prophetic translat'd out of the Hebrew into *Latine*, by one *Bemechobus* (a learned Bishop) which runs to this purpose, viz.

Deus tradet nos, &c. God shall deliver us into the hands of
 "Barbarians and Sarazens, Persia and Cappadocia to captivity
 "and slaughter, Syria He shall drive into a Wildernes, and
 "the People thereof into Bondage: Cilicia shall perish by the
 "sword, Grace and Affrick be destroyed: the Egyptians and
 "People (inhabiting the East parts) of Asia shall pay a grievous
 "Tribute. Spain, France, and Germany shall be devoured by
 "often Warres: of the Romans, some shall be slain, the rest
 "put to flight. And so the sons of Israel with their entiance
 "shall obtain the North, East, South and West. All Nations
 "shall be under their yoke and tribute: They shall possesse and
 "become Lords of all the rich Ornament's, Gold and Silver of
 "rich men, and of the sacred Temples. Then shall there be
 "great Tribulation, and the Passage of the Sarazens shall be
 "from one Sea to another, and their Countreys not to be tra-
 "velled through: Their way shall be called the way of anguish
 "and sorrow.

Melancthon also writeth, that he was told by a Noble-man Ambassador at Constantinople, of a Prophesy among Turks, which saith, They should conquer Hungary, Poland, and some part of Germany: and that afterwards their Empire should decline. Neither was *Melancthon* himself of other opinion, inasmuch as

it was his usuall saying, *Quando Turca veniet in Germaniam, veniet per Polonium*: When the Turk invades Germany, he shall come through Poland: Nor is it otherwile, if we judge thereof from the *Tayle of the Comet* in 1652. (as Philip Lamgrave of Haffia did the coming of the Spaniard) which threatens the mischiefs thereby signified from the North-East; that is, by the way of Poland.

Learned Men (also) there are, who by no contemptible arguments of Scripture, prove, *That yet there is a notable Calamity to be brought upon the Christians by means of the Turks, before the last day*: And (to go no further then common Reason) what signify those notable appearances of them every where, especially after the sight of this *Comet A° 1652. in Silesia, and against the Hungarians, yea (which is more) the Emperour himself?* The manifold preparations and excursions made but the last year against all *Defenders of the Christian name, and particularly the King of Poland*; who was then also invaded by the *Muscovites*, and thereby made lesse able to withstand that only common Enemy of Christendome.

Much more might be added to inculcate the danger *Christendome* is in, by means of the Turk pointed at by this *Comet*: But a people there is will think I have writ too much, if at all any thing of this Nature: However let such know they may in time have more reason to repent their ingratitude to God in neglecting such *Ostenta*, then I shall for my reverend regard thereof, and the diligent search I have made thereafter.

It is recorded of *Charles the Great*, that (heholding and dreading the *New-Starre* which presaged and preceded his Death) he was very inquisitive what it portended. *Eginardus* (who writ his History) returns the words of the Prophet *Jesay* (cap. 10. 2.) for answer, *Et a signis Cælorum ne conuincimini, quia confundantur Gentes ab illis*. Fear not the Signs Heaven, though the Heathen be afraid of such. Unto which prudent Emperour replies, *Nd quidem metuere ejusmodi tu, sed Signorum opificem Causam*: He did not indeed fear signes of that Nature, but the Maker (*Cause*,) of the war. A most wise saying, and fit to be written in Letters Gold. For, as *Herodotus* tells us, *Cum Deus puniatur est terra vel Orbem, prodigijs id soler prius significare*; when God about to punish a Nation, a Countrey, or City, he is first wont

want to give warning thereof by *Prodigies*. And shall we dare to fliegh or contemn such warnings? Medina (also) in the 2d Book of his *Paranofis* cap. 1. declares himself of the same minde, *Loquisur Deus* (saith he) *cum hominibus non modo humana lingua per arcus Yates, ut a peccatis avocentur, et resipiscant, sed nonnunquam ipsis Elementis in Formas ex Imagines diversas ad sororidem terrorum compositis: God speaks unto Men, not only with the Tongues of the Holy Prophets, that they might be reclaimed from sin and amend their lives, but at some times by the Elements themselves disposed into severall shapes and images, thereby to affright and terrifie them.* And such was the Fiery Spheres seen in the Air, before the Sabins invaded the Romans. Such were the images and signs of armed men in the Air at the conflict of the Greeks with the Persians. Such was the light of the Ravens in the Air before Alexander the Great his passing from Media into Babylon; Such were the *Prodigies* precurring and eaneuring the death of Casar. And such were all thole published by Garibus in his *Book de Phenomenis ostensis*, from the year of Christ 1641. to the year 1650. among it which the second systeme obserued in the East, Feb. 24. 1642. under the Constellation of Orion, concerned this Nation not a little, as hath been found by long and wofull experience,

Johannes Tackius (a German Doctor of Physick, and a learned Astrologer now living, in his *Cali Anomalon*) informs us, that in the Earldome of Aretio, this Comet extended forth an arm, and brandished a flaming sword towards the North and West parts of the Earth.

He sayes likewise, there were seen in Germany many other *Prodigies*; and some he instances, viz. Horrible Winter-*Thunders*, and the pregnant soyl labouring of a Dropse, (i. e.) an inundation. The miraculous sudden rising of a Fountain. A Mountain cleft asunder in the Countrey of Thuringia (in the Province of Saxony) and which (one part severing from the other) removed another place. In another Territory: *Chasmata*, or Disruption that is, great gapings or openings in the Heavens: In some places terrible flames of Fire: In other Voices were heard in the Air. And that to such as dwell near the Mountains of Westeria, Starre was seen, which shewed at the first with very bright Beams but soon after assumed the shape of the horned Moon (but greater then she is wont to be) casting out Flames from the middle part

thereof, a sad spectacle, and hurtfull to the eyes of those that beheld it. And that although the face of this same mock-moon was fiery, yet it cast so clear a light upon the Earth, that the hedgees were perceived to be waxing green. At last (saith he) it took the shape of a sickle or sickle destitute of an handle, and without any flames; in which manner it vanished. And this (he saies) happened on the 12. Calends of Febr. 1653. Luna serè silente.

The same Tackius likewise instanceth Letters he received from Persons of credit, wherein he had notice given of a Rainbow that appeared about the same time, the night being cloudy, and a great murmuring or noise heard in the Clouds, which Rainbow was not of sundry coulours, as it usually appears, but exceeding white, and projecting a clear light upon the Countrey of Alesfeld: which that it was not the light of the Moon, being so near the time of the New-Moon, may be safely concluded without any more ado. Other Prodigies (he saith) there were every where observed almost throughout all Germany, but that for brevities sake he omitted them.

Now what else should this Sickle signifie, but the *excision* of Men and *and Nations*; who in respect of their sinnes, are as a field of Corn ready for Harvest? See Rev. 14.v.14 and so to the end.

What the *renting* and *removing* of Mountaines, but the *Discord* of Kingdoms, and the *Minds* of great Personages departing or differing one from another? For, what are Mountaines, but Great men, set in the Highest places, and lifting their Heads, above other Mortals?

What else signify *Inundations* or the over-flowing of Rivers, but the entrance of strange People into the Land? [The waters which thou sawest, where the Whore sitteth, are Peoples, and Multitudes, and Nations, and Tongues, Rev. 17.15. See learned Hammona's Paraphrase upon the Text]

And, the Appearance of a decoloured Rainbow, what is it, but a token of the *wrath of God*?]

This Author further tells us, That in Autumn 1652. they had a monstrous growth of Mast or *Acornes* in many places of Germany, resembling the Heads and Teguments of the Turks. That the Comet was attended with great and destructive Fires in many places, as at Paris, Constantinople, and elsewhere: So also, that Iserloe (a Town in the County of Marchia) and the

Prison at Rudelstad, with many other Houses perished by Fire. I could wish no honest Men had cause so complain of the like here in England.

But that which I read in him with greatest admiration, is that he reports out of *Cassar Lib. 3. viz.* That in the year 1554. not farre from the City of *Harmstad in Transilvania*, this following writing was observed in Heaven, in fair and legible Characters;

I.N.R.I. MDLVI. I.A.R. EIN. ENDE
D I S E S R E I C H S.

And that at *Freiburge* the same year, on a very fair day, *Dn. nostrum Iesum Christum Irudi insidientem confectum fuisse:* Our Lord *Jesus Christ* was beheld sitting upon a *Rainbow*, as if upon his *Tribunall*, to denounce the universall Judgment.

Now what I pray you should such signes (beheld a 100. years ago) signify, but that like as our Fathers before the Floud (whom God had indulged or respited 120. years for their conversion, and doubtlesly no lesse forewarned by severall *Prodigies*) we might be exhorted to repentance and amendment of life, and with pious lamentation and mourning unto *God*, divert or extenuate the calamities approaching upon the World ?

But to draw somewhat nearer our own times, it may here be not unworthy our notice ; That within the space of 55. years last past (this present being included) there have been no fewer then 212. Eclipses of the *Luminaries*, viz. 125. of the Sun, and 87. of the Moone : whereof 71. we (the Inhabitants of Europe) the other 141. they of *Asia, Africa, India*, and about the *Antartique Pole* (not without great Horror) have observed : Besides, two great *Conjunctions*, two new *Starres*, and six *Comets*.

And what signified those *Clashings* and strange *Apparitions* in the Heavens, and those *gapings* of the *Clouds* Anno 1644. those *Pareliz* or *Mosk* suns the same and the three following years here in *England*, but the *troubles* and *changes* which have since followed ?

What that *irruption* of *Waters* at *Amstel* *dam* in the beginning of the year 1650 ?

What that *Inundation* at *Bilbo* in *Spain* the following year, 1651. but *Populorum & Gentium hostilium adventum* ? The *Inroads*

Inroads of People and Nations (their Enemies) into those parts?
Cardan Lib. 14. de Rer. var pag. 703.

What the unseasonable and sudden growth of Apples and other Fruits? The breeding of Rooks three Moneths before their accustomed time (which my self can testifie upon my own knowledge, three years ago in the Place where I dwell,) but the too soon and untimely accessse of mean and unworthy persons (such were many of the last dissolved Parl.) to *Nests* or *Places* of Honour and Trust: and the abortive issue of their too too prominent Designs and Actions?

What the three years last past, whilst the Heavens were as *Brasse*, and the Earth as *Iron* (*Dent. 28. v. 23.*) but *Inopian & diram Necesitatem*, A Dearth and dire Necessity to ensue? *Card. lib. 12. de Rer. var.*

What the warm-blood that rained at Pool in Dorsetshire June 20. 1653. and those dreadfull claps of Winter-Thunder and Lightning, Decemb. 1. 1653. and the fiery Learnings soon after the following Spring (observed in the Heavens for severall nights together,) but that —— which I must be silent in?

I finde recorded in *Leontius* a very memorable Accident occasioned by a *Flib* of *Lightning*, which strook out the first Letter of *Cæsar Augustus* (his Name) inscribed upon his Statue: whereupon the Augures divined, *Centum solos dits posthac uiteturum*: That he was to live but just 100 days after, which number the *Numerall Letter C.* betokened: and that it would come to passe, that he should be registered among the Gods, because *Æ S A R* (the residue of the Name *CÆSAR* (in the *Tuscan Language*) signified God. But to proceed.

What else should be portended by that Prodigy seen in March 1654. in the Northern parts of England, viz. Two Armies encountering one another, but the *Warres*, *Bloodshed* and *Slaughter* that hath and is to succeed within these Dominions of England and Scotland?

Not fearing to get up, nor falling down,
 Diverts the thoughts of climbing to a Crown:
 [Great things, and things incredible are they
 That *Catalin* attempts, to make His way,
 The greatest Evils He can, the blackest Sin,
 What not, to make Him more than *Catalin*?]

Nor shall gray hairs / despairing of successse,

Repose in quiet, or adventure leste :

Galba's stiff-limbs (when aged *seveny thre*,

And buckled up in warlike *Armory*)

To gain an *Empire*, stoutly durst withstand

The treacherous blowes of *Otho's* bloody hand.

And lastly, (but not the least to be taken notice of) what the two *prodigious Swarmes* of *Bees* (those *Monarchical Creatures*) that came *murmuring* through the *Aire*, (as if offended at all *Governments* but their own;) one, the 13. of *Juno* the last year 1654. in *London* (the *Metropolis* of *England*) where it fixed upon a *Man* as he passed the *streets* in *Couvent-Garden*: The other (upon the 21. of the same Month and in the same City) which clung to the end of a *Cart* near *Somerset House* in the *Strand*, but wha: these times will never endure to hear of?

Such *Conjectures* (for more they must not now be called) as have antiently been passed upon: he like *Prodigies* and their Issue, *Virgil* informs us of, *Aeneid. lib. 7.*

Of the State, or Condition of *Man*.

AT touching the *Condition of Man*, soasmuch as we daily see some Men (of ali Qualities) to flourish at one time, and at another time to be pezzed with mil-fortunes and adversities: yet this not alwayes through their own circumsp. ction or evil doings, but by a *celestiall cause* and *inclination* (not obvious to ali,) I say that the Persons signified by *Mars* (Lord of the *Revolution*) are they that shall this year wear the *Feather*: namely, the *Princes* (and others) ruling by *Tyranny* and *Oppression*, new *Conquerours* and *Usurpers*, *Generals* of *Armies*, *Colonels*, *Captains* and *Commanders*, all manner of *Soldiers*, *Physitians*, *Apothecaries*, *Chirurgians*, *Alchimists*, *Gunners*, *Marshals*, *serjeants*, *Baylifs*, *Squires*, *Armourers*, *Cutlers*, and the like. See my worthy friend *Mr. Lally's Introduction*, pag 67.

Those signified by *Jupiter* (*Combusc of the sun*) shall be (as *Holy saith*) like to *Captives*, *Quorum vires sunt vindictæ & ligatae*, whose Strength is in *chains* and *scatters*. Such as be even ali *Judges* and *Senators* (in the worst sense) *Church-men*, *Bishops*, and *Priests*

Priests (in the best sense:) Also those that call themselves Ministers or Teachers (of Non-sense,) Chancellors, Counsellors and Civilians; all manner of Lawyers and young Students, &c. But let some of these be of good cheer — The time is at hand: and it is but waiting the leisure of Heaven for every one to have His Right either in Person or by Proxy.

In Anni Revolutionibus, si Luna debilis & peregrina applicuerit, infortunis Saturno vel Marti potentibus denotabitur Populo infelicitas, depresso, impedimentum in negotiis: defectus virtus & lucri, multa q; infirmitates Populum affligerent. If in the years Revolution, the Moon being weak and peregrine apply to either of the unfortunate Planets Saturn or Mars, in a powerfull Pessure: then shall Infelicity, Depression, Impediment in their affairs, want of Provision and Gain, be denoted to the People, and many infirmities will afflict them. And this the rather, because of the Proximity of the Dragons Tayle to the Cuspe Ascending, which bath likewise signification upon the Common-People or generall state of the Nation.

For the Head and Tayle of the Dragon, although they be not Starres, but only Intersections of the Ecliptique, yet have they the vertue of Starres, and sometimes greater then they. The reason is; because that in these Intersections, the Eclipses of the Luminaries always happen, by means whereof they do marvellously contribute in the Changes of things, when joyned with the Planets especially, and accordingly after the Quality of the year, as hath been observed by long experience. Therefore now to be questioned.

Thus farre have we briefly touch'd what I judged necessary or safe to be taken notice of in this Revolution, and the Causes or Signes preceding and concerning it: (I know much more may be read in the Figures; but this I'm resolved shall suffice: for) now it is high time we reflect upon

The Eclipses 1655.

Ptolomy and the Ancients very seldom (or never) gave judgment upon Eclipses, great Conjunctions or the like, before they happened: and that first they had observed by Instrument the precise times thereof. Nor indeed could they very well the contrary, wanting the many curious Observations later Ages

Ages have made, and the benefit of those excellent Tables Astro-micall, built upon that Foundation.

And (to deal candidly) I could wish it were drawn into Custome, to do yet no otherwise our selves: For, although it be true, there can no considerable error be committed in the Degrees deficient, or the places of great Conjunctions, and the like; yet it is to the true Times of all or any of these, the hazard is obvious, whilst depending upon Tables requiring Reduction, we know not how happily we can perform it beforehand: So that erring in the moment of Eclipses or other Configurations, we cannot but the like in the Times their Effects begin, and continue. Howbeit, the Effects of the Eclipses this year but a little concerning us, nor the Guerdon (otherwise) encouraging, it shall suffice that we rest contented for the present, with what the Tables afford us.

The Inhabitants of this Earthly Starre, shall twice this year, be deprived of a part of the Suns Light, by the Mons Interpolation. Once, the 27th of January 33. min. after High-Noon: but not to the Quantity of one Digit in any part of England. To other Regions whice incline more to the South-West [in France, Italy, Spain, the Fortunate Island, &c.] it will appear much greater: and in the South Latitude of 3°. 23'. viz. in the Countreys that ad oyn upon the South Coasts of Afr que, the Sun shall be almost totally darkened, in the 17°. 54'. of Aquary.

It threatens Astrologically (Publique Thefts; or what we (modestly) call Plundering, &c. Robberies, Rapes, Earthquakes in the Countreys naturally subject thereto) and Famine, with Monopolies, and other ungodly Devices of pilliug and polling the Over-ridden People.

The second time, on the 23th of July, 24' past one in the Morning, but not visible in any part of Great Brittaine, or Ireland, &c. because the Luminaries are then both under the Earth, and the Latitude of the Moon Southern.

This happens in the 9°. 27'. of the Lion: which foretells the death of a famous Prince, or (if not) his many Misfortunes: with great Scarcity of Corn and Grain.

Andreas Argolus (a great Mathematician, and an eminent Astrologer) in his Ephemeris for this year, gives us two more Eclipses of the Moon: viz. One the 8th of July, the other the 7th of August. But this Noble Author shrewdly mistook in his Calculations.

Calculation: for there cannot be (this year) any other *Eclipse*, either *Lunay* or *Solar*, then what I have here mentioned; as time will manifest.

Thus farre I have proceeded in the *Generall Accidents* accident to mankind, &c. from the *Comet*, *Eclipses*, *Revolution* of the *World*, and other extraordinary *Signes* and *Causes* formerly mentioned. Now, to know the particular Persons concerned therein, and on whom their effects shall fall, the *Happiest* or *Heaviest*: it were requisite that I first knew and perused their respective *Genitures*; for by that means I might discover abundantly, the *Rise* and *fall* of some who act their parts so eminently upon the *Stage* of this *World*; what men or women shall have *Fortune*, or *misfortune*, *peace* or *discord*, *gaine* or *losse*, *comfort* or *discomfort* in their enterprizes and actions, *beath*, or *sicknes* in their *Bodies*, and when: In a word, any thing that concerns *humane affairs*; (for with those that be *divine* or *supernaturall Astrologers* meddle not.) But as I trouble my self with few *Nativities*, nor (of those few) consider any, unless of good and signall concernment, or such as I shall be peculiarly (and upon good terms) enjoyned to look into: so shall I forbear all further *enquiries* this yea; except after what my self or intimate friends may occasionally thirst for private satisfaction in. And 'tis hoped by me, that what I have here written will not be found offensive to any body, but those *Monopolizing Stationers*, whom nothing will satisfie but my *ruine*, which I hereby assure them of, rather then the least parcell of my *Proprietie*: and if yet my *Ears* must needs be *Horns*, 'tis fit shose *Fellowes* should wear them.

Confederates in Mischief quickly fall:
Their Ruine's sure; oft-times Reciprocall.

*Deo proteCTORI nationIS oMNIIS honor
& gloria,*

**Books worth buying, as being Learned,
Honest, and Usefull.**

Ephemoris Parliamentaria, or a faithfull Register of the transactions of those eminent Parliaments in the beginning of K. Charles his Reign, containing the severall Speeches, Cates, Arguments of Law, together with the great mysteries of the Kingdom then in agitation between His Majesty and both Houses.

The Letters of that most excellent Orator Monsieur de Buzack, the 1, 2, 3, and 4th Parts, translated out of French into English by Sir Richard Baker and others, newly collected into one volume, with a methodicall Table of all the Letters, both printed for John Williams, and Francis Eglesfield, to be sold in the Crown and Mitre old in S. Pauls Church-yard London.

The Compleat Ambassador, or two Treaties, of the intended Marriage of Queen Elizabeth of blessed memory, comprised in Letters of Negotiation, of Sir Francis Walsingham her Resident in France; together with the Answers of the Lord Burleigh, the Earl of Leicester, Sir Thomas Smith and others; wherein as in a clear mirror, may be seen the faces of the Courts of England and France, as they then stood, with many remarkable passages of State, not at all mentioned in any History; Fully collected by the truly Honourable, Sir Dudley Dass Knight, late Master of the Rolls: in folio.

As also, The *Ladies Cabinet enlarged and opened*, contains many rare secrets, and rich Ornaments; under three heads, Preserving, Conserving, &c. Phisick and Chirurgerie; Coinery and Housewifery; with choice extractions of Water, Oyls, &c. collected, and practised, by the late learned Chymist the Lord Rushuen, with Tables to each part: The third Edition with Additions; both these printed for, and sold by G. Bell and T. Collis, at their Shop at Middle-Temple-Gate in Fleet-street.

Calamus Mensurans: The Measurur Reed: Or, The standard of Time. By John Swan, an honest Divine, a learned Mathematician. To be sold by John Williams at the Crown in S. Paul Church-yard.
